

Omnigaze device

V. 2.04

<https://joubinzargarbashi.com/omnigaze>
(To be printed in 100% scaling)

Omnigaze is a collective action during which the attendees from different geographic locations look at the same point in the sky at the same time.

This print includes the omnigaze device cut-out and instructions that makes it possible to take part in omnigaze. To learn more about omnigaze, please visit the omnigaze webpage.

Omnigaze action instructions

Please try the instructions and practice with the device beforehand so that you can concentrate better at the the action of concentrating your look at the shared point at the moment of omnigaze.

Also please be reminded that the omnigaze moment is 12:00hrs GMT. You need to convert this to your local time. For example in Amsterdam, the 12th omnigaze would be at 14:00hrs.

While reading the instructions, consult the omnigaze device illustrations on this page. More information including a very helpful *instruction* video is available on omnigaze webpage.

It is advisable to wear shades especially in the presence of intense sunlight.

- Stand towards the sun.
 - Using your right hand, hold the device with the tip of your fingers in a way that the device's Horizon line is kept horizontal and the side of the device with the city points faces you.
 - Extend your arm.
 - Raise your arm and the device and while keeping the Horizon line horizontal make sure that you can look through view finder.
- In the view finder and from your perspective, the black triangle in the front of the box should just touch the hollow triangle at the back of the box (as is shown in the illustration on this page).
- While maintaining your view through the view finder, and by moving your arm, adjust the angle of your arm until the lower edge of the sun light notch lays on the city of your location.
 - Now the view finder is showing you the point of omnigaze in the sky. Concentrate on looking at that shared view point.
 - Continue your look for sometime after the moment of omnigaze is passed.

How to build the omnigaze device

- Cut the outline of the device.
- Fold the paper along the fold lines in such a way that the printed lines are on the outside of the device.
- Cut out the pieces A and B.
- Fold the paper similar to the illustration below, and by using glue on the glue edges, fix the sides together.
